(54) METHOD FOR INSTALLING EARTH PLATE FOR POLE AND EARTH PLATE THEREOF

(57) Abstract:

PURPOSE: A method for installing an earth plate for poles and an earth plate thereof are provided to simplify an installing work of an earth plate and obtain a stable earth resistance by burying an earth plate into an outer circumference of a lower portion of a pole.

CONSTITUTION: An earth plate(10) is installed at a pole. The earth plate (10) is formed with a plate body(11). The plate body(11) is formed with low-priced and conductive cooper. A combination portion(12) is formed at one side of the plate body(11). The combination portion(12) has a plurality of projections. A plurality of combination grooves(13) are formed at the other side of the plate body(11). An earth bar(14) is formed at a predetermined position of the plate body(11) in order to connect a drawn line installed in the inside of the pole. The earth plate can be deformed to various shapes.
